PROJECT: Tentative Parcel Map No. 2873-Vaira Ranch, proposing the division of ±154 acres into three (3) parcels 10±, 64±, and 79.5± acres in size. Proposed use of the parcels is residential, and all parcels will retain existing X, Special Use District zoning and AG, Agricultural General, General Plan Designation (40- acre minimum). This variation in parcel size is consistent with County Code Section 17.32.030 which allows the Planning Commission to authorize deviations in lot size provided that there is no more than ten percent increase in density in the overall development. This project does not propose an increase in overall allowable density. (APNs: 008-210-008, 008-210-009)

Applicant: Jean B Ely, Judy L Chaffee, and Janet M Bawart;

'END OF DOCUMENT'

Mr. Chuck Beatty
Amador County Planning Department
810 Court Street
Jackson, CA 95642

20 December 2020

Dear Mr. Beatty,

At the request of Mr. Robin Peters of Cal State Engineering I visited the Vaira Ranch property (APNs 008-210-009 & 008-220-008) on Vaira Ranch Road with the intent of conducting an Oak Woodlands Assessment as required by the State of California under PRC 21083.4. The proposed project would subdivide the Ely/Chaffe/Bawart property into three parcels of 10 acres, 64.5 acres, and 79.5 acres. No new roads are currently planned to access the three parcels.

As you know, the State of California requires a project, as defined by CEQA, to assess the potential for impacts to native oak woodlands and, if necessary, take mitigating action. My responsibility, as a Registered Professional Forester, is to determine if the vegetative cover on the project area qualifies as native oak woodland (greater than 10% canopy cover of native oaks) and if so, to determine if the proposed project will likely have a significant impact upon that oak woodland.

My assessment of the Vaira Ranch property involved a comprehensive reconnaissance of the property to evaluate the vegetative cover and the potential effect of creating three parcels and if the forest cover qualifies as native oak woodland. I began my evaluation by inspecting the southern portion of the property south of Rancheria Creek where an existing road climbs the north-facing slope above the creek. This area is the most densely forested part of the property. Scattered oaks and smaller groups of oaks exist over the entire property, but the stand of oaks in the proposed parcels 2 and 3 is significant and representative of the diameters and crown sizes of the oaks on the Vaira Ranch property. There are a few other stands of oaks located in the north and eastern side of the property and also groups of 2-5 oak trees scattered over the property.

Though it seemed apparent from aerial photography that the property has sufficient oak canopy to qualify as oak woodland, I performed my due diligence and measured inventory plots, including noting diameters, crown diameters and species present within the largest oak stand of oaks and in two other smaller stands. I also estimated the acreage of the oak forest canopy using a planimeter to calculate the square inches of canopy cover and converted square inches to acres using a factor of 1 sq.in. = 0.92 acres.

The oak trees on the Vaira Ranch property vary in size from small diameter trees (6 inches DBH) to larger trees (20-22 inch DBH) with an average diameter of 15 inches. Canopy diameters vary from 20 feet to 50 feet with an average of 36 feet. The basal area stocking level of the largest oak stand is approximately 76 square feet per acre and the number of trees per acre in that stand is approximately 58 trees per acre.

My estimate of the total area covered with oak canopy is 50 acres. Dividing the total acreage of 154 acres by 50 acres results in an estimated oak canopy coverage of 32.5%. Section 360 of the Fish & Game Code defines native oak woodland as lands having at least 10% of the surface area covered with native oak canopy, excluding commercial species controlled by the Forest Practice Rules. The stocking level and canopy coverage of native oaks that exist on the Vaira Ranch property definitely exceeds the 10% canopy coverage criteria and results in the property having a classification of native oak woodland.

Since the native oak stocking level qualifies the property as oak woodland, the PRC requires an evaluation of the proposed project in terms of its potential for causing an impact on the oak woodland.

My assessment of this question took into account the level of native oak stocking in relation to the location of potential building sites, the topography of the land and the feasibility of road construction for the two new

proposed parcels. Vaira Ranch Road and the existing road that crosses Rancheria Creek are adequate to access the two proposed parcels, so no impacts to oak woodland are anticipated due to road construction. There are at least two potential building sites on each of the two proposed parcels and the removal of oak trees to facilitate residential construction is not likely to result in a significant reduction of the oak woodland.

Given the minor amount of likely construction that might take place in the future and the plan to maintain the property in agricultural production, I feel that the potential for impact to native oak woodlands as a result of this proposed project to be insignificant.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

Steve Q. Cannon
