WHEREAS, prostate cancer is the most frequently diagnosed cancer in men aside from skin cancer, and it is estimated 1 in 8 men will develop this disease in their lifetime; and

WHEREAS, the American Cancer Society estimates there will be 161,360 new cases of prostate cancer in the USA in 2017, resulting in an estimated 26,730 deaths; and

WHEREAS, it is estimated 14,520 men in California will be diagnosed with prostate cancer this year and it is estimated 3,130 California men will die from this disease; and

WHEREAS, men of African American descent have the highest prostate cancer incident rates in the world and their death rate is twice as high as any other ethnic group; and

WHEREAS, early prostate cancer usually has no symptoms and studies suggest strong familial predisposition may be responsible for 5% to 10% of the disease cases; and

WHEREAS, advanced prostate cancer commonly spreads to the bones, which can cause pain in the hips, spine, ribs, or other areas in the body, and

WHEREAS, the 5-year survival rate approaches 100% when prostate cancer is diagnosed and treated early, but drops to 29% when it spreads to the other parts of the body; and
